

Gentlemen,

Amateur radio will be a thing of the past with all of the RFI signals that are increasing in the atmosphere. With broadband cable and DSL there is really no need for transmission of broadband signals by power lines. Since DSL has arrived in my neighborhood the Broadcast Band in our neighborhood is covered with whistles and noise that makes it possible to only hear a few local stations. Any communication with knowledgeable technicians or engineers at the phone company is stonewalled quickly. Lets keep RF as channeled as possible and as pure as possible. Joseph S. Lord-- Electrical Engineer and Radio Amateur.
